

COLOR SELECTION

Enclosure Powder Coat Colors

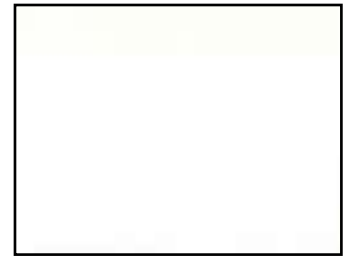

Tramont Manufacturing generator enclosures receive a powder coat finish for maximum durability in all types of weather conditions. The pigment is applied as a dry powder to steel, galvaneal, aluminum and stainless steel enclosures and then baked on to create a smooth, seamless shell.

Tramont offers the powder coat colors at right and below. Custom colors are also available. Texture finish is standard for all colors except Cadet Blue in satin finish. Other finishes available upon request unless noted.

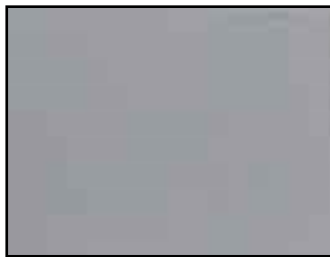

IMPORTANT: Colors shown here are approximate and are for general reference only. Contact Tramont Manufacturing if you require actual powder coat samples.
